							ROTLOS R.F21	ROTLOS R.F21					L = Left (when 2nd/4th letter) or Lime R = Right (when last letter) or Red			
YOUNG Hatched Locally in 2025	YOTLOOSR.25	YOTLOOSR.25	LOS LGORR.25	LOS LGORR.25							BOOLROS R.25	BOOLROS R.25	Sex indicated by M or F if ever a breeder; by m or fe when sex less certain			
	GOSLBOWR.25	GOSLBOWR.25	WOSLTOYR.25	WOSLTOYR.25							BOSLGOYR.25	BOSLGOYR.25	Year of Hatching is number at end of name. A "<" before year means bird's age is uncertain but that it hatched no later than a year earlier.			
	LOWLROS R.25										LOBLTOSR.25		Example: TOSLROWR.F19 = light blue Over Standard Left, Red Over			
											TORLGOSR.25		White Right, a breeding female hatched in 2019 (6 years old in 2025)			
											YORLOOSR.25		Example: PLBOSR.M<16 = Purple Left, dark Blue Over Standard Right, a breeding male, exact age unknown but hatched no later than 2015			
Hatched Elsewhere																

¹Sex (if known) and year of hatching indicated by number after name (e.g. "17" = 2017). A "<" before the year (e.g., "<15") indicates that the bird's age is uncertain but it hatched some time before the indicated year (2015 in this example).

²Two or more pairs known to have attempted nesting on this territory in 2025. Known breeders indicated in boldface.

³LOS LRR rebanded in fall 2022 as "SOLLRR" (Standard Over Lime Left, Red Right)

⁴BOS LPR rebanded in fall 2022 as "SOBLPR" (Standard Over dark Blue Left, Purple Right)

⁵After rebanding in fall 2022, WOSLKR now appears as "SOWLKR" (Standard Over White Left, pink Right)

⁶The Trailhead territory had two nesting pairs in 2025 but we believe that the three young hatched this year were all from the primary pair, PLBOSR and TOSLROWR.

⁷The Biathlon territory had two nesting pairs in 2025. Given the large number of young (6) produced on the territory, both nests were probably successful but we must await DNA analysis of blood samples to determine which parents produced which young.

⁸The Campground territory had two nesting pairs in 2025. Given the large number of young (7) produced on the territory, both nests were probably successful but we must await DNA analysis of blood samples to determine which parents produced which young.

⁹Although WOGLOOSR and ROTLOS R attempted to nest on Midway in April, nothing came of it and both birds are now subordinates on the neighbouring Battleship territory (which, in effect, has expanded to include the former Midway territory).
